

HACCP INTERNATIONAL

eliminate the hazard - reduce the risk

HACCP International is a global certification body and its certification scheme is titled 'Food Safe Equipment and Materials'. It is designed to give food businesses that are required to operate to the world's highest food safety standards assurances as to the suitability of products used in operating food businesses.

Many well know suppliers of food safe equipment and materials carry the certification mark and one of those is Green Drain Floor Drain Trap Seals.

In many food businesses, flooring and floor waste are significant issues and hygienic operation of facilities is often compromised. Green Drain's products present an excellent effective risk reduction tool.

They present a very effective barrier between the superstructure and infrastructure.

In obtaining HACCP International certification, Green Drain's product, as well as being required to meet a number of important food safety criteria, must, in themselves, presenting a real contribution to food safety.

We are pleased to say that Green Drain's products* met all the criteria.

When considering flooring and drainage issues in food facilities, whether in the design stage or retrospectively, we recommend that designers, specifiers, operators, plumbers and QA staff consider these products and the benefits they can bring to an operation in terms of waste management, cleaning and sanitation and pest control.

For more information, please feel free to contact HACCP International and speak to a member of the technical team
